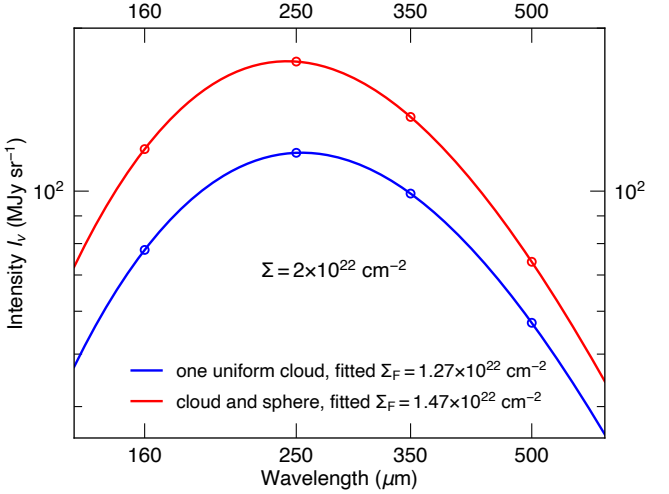
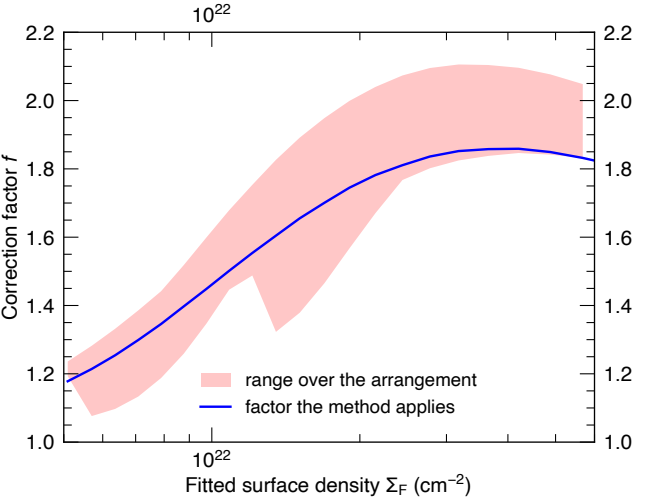
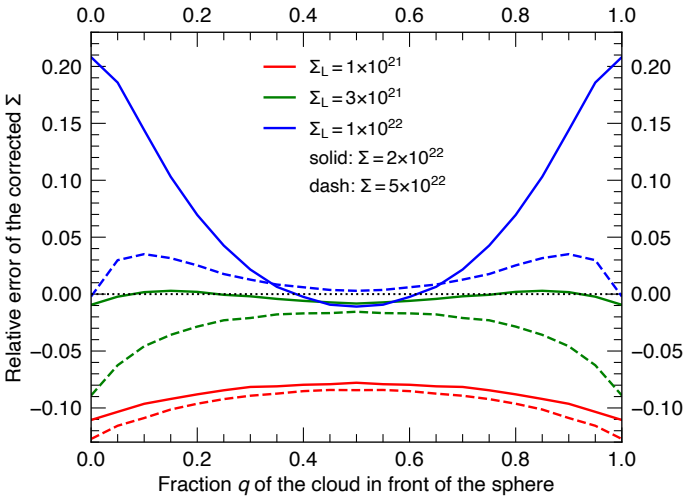
to observer
one uniform cloud
cloud and sphere
sphere
Σ = 2×10^22 cm^−2
Temperature T (K)
Surface density from the near side (10^22 cm^−2)



Σ = 2×10^22 cm^−2
one uniform cloud, fitted Σ_F = 1.27×10^22 cm^−2
cloud and sphere, fitted Σ_F = 1.47×10^22 cm^−2
Intensity I_ν (MJy sr^−1)
Wavelength (μm)



range over the arrangement
factor the method applies
Correction factor f
Fitted surface density Σ_F (cm^−2)



Σ_L = 1×10^21
Σ_L = 3×10^21
Σ_L = 1×10^22
solid: Σ = 2×10^22
dash: Σ = 5×10^22
Relative error of the corrected Σ
Fraction q of the cloud in front of the sphere
