to observer
one uniform body
cloud with an embedded sphere
Sphere
Temperature T (K)
Surface density from the near side (10^{22} cm^{-2})
Intensity I_ν (MJy sr^{-1})
Total $\Sigma = 2\times10^{22}$ cm^{-2}
one uniform body, fitted $\Sigma_f = 1.26\times10^{22}$ cm^{-2}
cloud and sphere, fitted $\Sigma_f = 1.47\times10^{22}$ cm^{-2}
Wavelength (μm)
Correction factor f
range over the arrangement
factor the method applies
Uncorrected Σ (cm^{-2})
$\Sigma_c = 1\times10^{21}$
$\Sigma_c = 3\times10^{21}$
$\Sigma_c = 1\times10^{22}$
solid: $\Sigma = 2\times10^{22}$
dash: $\Sigma = 5\times10^{22}$
Relative error of the corrected Σ
Fraction q of the cloud in front of sphere
